Subject: water-sediment monitoring animas

All

I talked to several of you about developing a draft proposal/strategy for monitoring and evaluating sediment concerns on the Animas River and beyond-perhaps even starting this fall if we can get some folks in the field. A joint water quality/superfund effort seems to make sense here and this would give us a starting point for collaborative discussions with R6/9, states and tribes. Sandie you mentioned that you asked Karl to start thinking about this so I ask that you set up a call with folks on this email to discuss once you have given it some thought. If we could have a draft proposal developed by the end of this week that would be amazing.

Sandy
